## DETAILED ACTION

### ***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-7, 9, and 11-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions<sup>2</sup> indicate that a statutory “process” under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. Although, claims 1-7, 9 and 11-12 are directed toward a method, a computer system, and a device, the specification only discloses software embodiments of the invention, which amounts to a computer program. A computer program does not fall within one of the statutory classes of invention under 35 USC 101, therefore, claims 1-7, 9 and 11-12 are directed toward a non-statutory subject matter.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-7, 9, and 11-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what the applicant means in step (f) of claim 1, "repeating acts a) to e) for all required pitch bell locations of the signal to be synthesized and performing an overlap and add operation on the resulting pitch bells in the domain of the signal to be synthesized in order to synthesize the signal". Even though the method of, computer system for, and a device for "synthesizing" a signal, there is no synthesis of a signal taking place in recited claim language and also on what type of a signal the synthesis is performed on.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-7, 9, and 11-22 have been considered but are moot in view of the new ground(s) of rejection.
